CONSULTANT	AR ARCHITECTES
COMPANIES	SPR bâtiment et industrie and Verre & Métal
DATE	Construction work achieved in 01/2026

Eau de Paris headquarter building

Drinking water fountain on the façade - Existing condition

Replacement of the fountain with glazing – Completed works

As Eau de Paris vacated the building on rue Neuve Tolbiac to move into its new headquarters, the project aimed to **restore the façade to its original condition**. The works included the **removal of the public drinking water fountain** and the installation of **new glazing identical to the existing one**. As the interior layout constituted a constraint for the installation of the double glazing, **selective demolition works** were carried out. The studies also addressed **the removal of two “Eau de Paris” signs** located on both street façades.

ARARCHITECTES acted as the project's lead architect, supporting Eau de Paris through a full architectural services commission, while coordinating the work of the two construction companies.
