Saint-Vincent de Paul church

Saint-Vincent de Paul church - view from Marcelin Berthelot street

The project will focus on the heritage renovation of part of the roof of the Saint Vincent de Paul parish church, located at 94 Boulevard Jean-Jaurès, 92110 Clichy-la-Garenne, France.

The renovation work must be carried out identically to the existing structure, in terms of materials, construction methods, and architectural appearance.

The lean-to roof covering the side aisle of the Saint Vincent de Paul church, located to the southeast of the building.

The replacing the slate roofing.

The zinc flashing on the parapet walls and the zinc gutter.

THE PROJECT CONSISTS OF :

- exterior work :

- The restoration of the lean-to roof covering the side aisle of the Saint Vincent de Paul church, located to the southeast of the building, to match the existing structure. The exterior work includes replacing the slate roofing, including the zinc flashing on the parapet walls and the zinc gutter.

- interior work :

- The work involves replacing the existing structure of the pitched roof: wooden rafters and battens.
- Insulation between the rafters and the installation of a vapor barrier are optional.
- The installation of lighting for the underside of the pitched roof, controllable by switches or motion detectors.
- The work involves creating an access opening in the wall located under the ridge beam to allow easy access to the underside of the roof for maintenance.
